**Acknowledgements:** AVEC thanks BPC, CIDEF and HK SCAN Denmark for their contribution to the 2018 annual report

# Introduction

**Since 2017, poultry meat has been the most eaten meat in the world. In the context of growing demand, poultry meat has many strengths which are likely to further contribute to its growing presence in the marketplace.**

The European poultry meat sector is an example of solid European excellence in farming and food production. The sector is highly integrated with a holistic approach driven by science, innovation and entrepreneurship that is delivering sustainable, secure and trusted supply chains.

The vision of AVEC is to bring European poultry to every table. Every consumer, every food professional, every official and every politician needs to know the high value of the European poultry sector.

By choosing European poultry meat, consumers all over the world make a quality choice and we are committed to maintaining consumer confidence in our products via a high level of knowledge, innovation and transparency.

The ongoing success of the European poultry meat sector is defined by its commitment to these core aims:

- **to provide EU citizens with healthy, sustainable, safe and affordable meat**
- **to contribute to a healthy EU economy by creating jobs and supporting trade**
- **to defend and uphold EU food safety, animal welfare and environmental protection standards**

The health and welfare of animals is one of the cornerstones of AVEC. We do everything we can to keep our animals healthy. If animals do become ill, they must be treated properly. In some instances, antibiotics may be required to treat bacterial infections, but they should only be administered when necessary and only following a veterinary diagnosis and prescription.

AVEC is committed to promoting the responsible use of antibiotics to minimise the risk of antimicrobial resistance.

Poultry meat is the most traded meat globally and the European sector has more than once been traded off against other sectors when finalising trade deals. This has led to more imports to the detriment of jobs and farms in our EU rural areas. **This is not acceptable.** Poultry meat should always be treated as a sensitive product in trade negotiations.

The compliance of poultry meat imported from third countries with EU legislation on food safety, animal health, environment and animal welfare is an absolute requirement. Cases during the last year have highlighted significant non-compliance with EU rules on imports from third countries. AVEC calls for the stricter control of all imports of poultry meat from third countries. When it comes to trade deals, AVEC is concerned when trading partners act against the spirit of ratified free trade agreements. EU stakeholders need to be in very close dialogue with the Commission when technicalities are being concluded with partners, to limit the risk of trade being done against the spirit of the agreements.

The UK withdrawal from the EU in 2019 could have a significant impact on the EU poultry sector for both parties. The EU poultry sector (including our UK member) advocates strongly for a status quo regarding a future free trade agreement and the split of imports from third countries with the application of EU regulations and no border control or custom clearance.

By advocating for European policies which will work on the global stage, AVEC will continue to work for the development of a solid and thriving European poultry meat sector.

**Paul Lopez**  
President

**Birthe Steenberg**  
Secretary General

“

The European poultry meat sector is proud of producing more with less. We are committed to sustainable poultry production through a low carbon footprint, minimising waste and using all of the bird.

”

# Our association

## Who are we?

AVEC is the voice of the European poultry meat sector. We facilitate communication between international organisations and decision-makers and focus on key areas such as animal health and welfare, food safety and quality, trade, and sustainable development.

## Our core aims:

- **to provide EU citizens with healthy, sustainable, safe and affordable meat**
- **to contribute to a healthy EU economy by creating jobs and supporting trade**
- **to defend and uphold EU food safety, animal welfare and environmental protection standards**

Our members are national organisations representing poultry processors and the poultry trade in 15 EU countries. AVEC's members represent 95% of EU poultry meat production. Our vision is for a future with European poultry on every table.

We are committed to improving knowledge, innovation, and transparency in the European poultry meat sector. Our values mean that every consumer, food professional, official, and politician can have confidence in our products.

## Administrative structure

The AVEC secretariat is based in Brussels and gathers information and analyses of current issues, distributing these to the member organisations. The office is led by the secretary general, Birthe Steenberg, who is assisted by two policy advisors, Laura Mazzei and Paul-Henri Lava.

## The Presidency and the Board

The president of AVEC is Paul Lopez from the French association FIA (Fédération des Industries Avicoles).

AVEC has four vice-presidents who assist the president. Piotr Kulikowski from KRD (Poland), Paul-Heinz Wesjohann from BVG (Germany), Philip Wilkinson from BPC (UK), and Mario Veronesi from Unaitalia (Italy).

Our general assembly takes place on an annual basis, usually in September or October, with up to 150 delegates participating. Speakers from the industry, the EU institutions and from other international organisations are invited to give their views on key issues relevant to the poultry sector.

## AVEC working groups:

AVEC's five working groups are committed to tackling some of the key areas in the European poultry meat sector.

- the **Animal health and welfare working group** focuses on an area that is critically important to AVEC and the European poultry industry: protecting animal health and welfare.
- the **Food safety and food quality working group** is committed to producing food that consumers can trust. It defends food safety standards around Europe and brings quality products to the table.
- the poultry sector is working to increase the efficiency of production to address the challenge of climate change. AVEC supports this through its **Sustainable production working group**.
- AVEC's **Trade working group** supports WTO multilateral trade agreements. It actively contributes to EU initiatives to strengthen exports and introduce bilateral free trade agreements with third-country trading partners.
- the **Communication working group** enhances the communication surrounding the promotion of the EU poultry meat sector, raising its profile on the EU agenda. AVEC's new logo, website and updated annual report are the first tangible results of its work.

# Our members

**AVEC represents the European poultry sector, giving a voice to all participants. Our members include national organisations that represent the poultry industry and poultry trade in 15 EU member states.**

“AVEC’s vision is for a future with European poultry on every table.”

# EU and International key partners

**AVEC** cooperates with many other international organisations depending on the issues at hand. **AVEC** has regular contact with other stakeholders in the agri-food sector, in particular within the meat sector. The exchange of views with other key stakeholders on technical and strategic issues is extremely useful.

**AVEC** shares its Brussels offices and team with the European Live Poultry and Hatching Egg Association (**ELPHA**) as well as with the European Poultry Breeders (**EPB**).

**ELPHA** promotes the common interests of the European live poultry sector in the policy area of live poultry and hatching eggs, making representations to the European institutions. The main interests of **ELPHA** members are in the areas of EU trade and export, animal health, animal welfare and genetics. **ELPHA** also recognises that food safety and security starts with the high-quality production of live poultry.

**EPB** is a member of **ELPHA** and promotes the interests of companies that are active in poultry breeding in the EU.

The close connection between **AVEC** and **ELPHA/EPB** allows the European poultry sector to profit from the mutual sharing of knowledge on common poultry issues, strengthening our efforts to improve the EU poultry industry's global competitiveness.

**AVEC** also has valuable communication and cooperation with **COPA-COGECA**, the association representing European farmers and agri-food cooperatives.

Depending on the issues, **AVEC** also builds alliances with other European associations in the feed and food (meat) supply chain, such as **EFFAB** (the European Forum of Farm Animal Breeders), **CLITRAVI** (the Liaison Centre for the Meat Processing Industry in the European Union), **UECBV** (the European Livestock and

Meat Trading Union), **FEFAC** (the European Feed Manufacturers' Federation), **FOODDRINKEUROPE** (the body representing the European food and drink industry), **AHE** (Animal Health Europe), **FFPRA** (the European Fat Processors and Renderers Association), and **EUROCOMMERCE** (the association for retail, wholesale and international trade interests).

Since 2017, **AVEC** has been a part of the livestock policy coordination group together with several other associations in Brussels – **FEFANA**, **UECBV**, **EDA**, **FEFAC**, **EWEP**, **CLITRAVI**, **EFFAB**, **FUREUROPE**, **AHE** and **COPA-COGECA** – dealing with agriculture and food production. **AVEC** welcomes the activities of this platform which aims to spread good practice from the agriculture and food sector to a broader audience.

The cooperation and coordination with these European associations results in common positions. For example, guides to promote food safety or the welfare of poultry have been drafted in partnership to assist members with the implementation and application of European legislation.

# AVEC, a member of the International Poultry Council

The International Poultry Council (IPC) was founded on 5 October 2005 on the initiative of AVEC together with associations in Argentina, Brazil, Canada, Chile, China, Egypt, the EU, Mexico, Thailand, Turkey and the USA.

Today, the IPC brings together 26 country members and 55 associate members, which are subdivided in producers/processors (22), suppliers (20) and end users (7). AVEC has a seat on the executive committee of the IPC.

IPC's objectives include encouraging the development and application of uniform and science-based international sanitary and marketing standards for poultry; promoting technical cooperation and the exchange of science-based principles between national authorities; promoting the transparency of governmental policies affecting poultry in all countries; and maintaining a dialogue with relevant international organisations such as the OIE, Codex Alimentarius, FAO, WHO and WTO.

As part of its process of increasing the participation of its members on key issues, the IPC has formed four working groups to address these issues and to propose policies and practices to bring before the membership for discussion and possible adoption. The four working groups cover:

- Animal health and welfare
- Processing and food safety
- Marketing and consumption
- Environment and sustainability

Since 1 June 2015, Marilia Rangel, former foreign markets coordinator with the Brazilian Association of Animal Protein (ABPA), has been appointed secretary general of IPC and is dedicated to the post full-time.

## About the IPC

- Founded on 7 October 2005
- Official seat: 2300 West Park Place Boulevard, Stone Mountain, Georgia, USA
- Represents more than 90% of world broiler production and about 95% of world poultry trade
- [www.internationalpoultrycouncil.com](http://www.internationalpoultrycouncil.com)

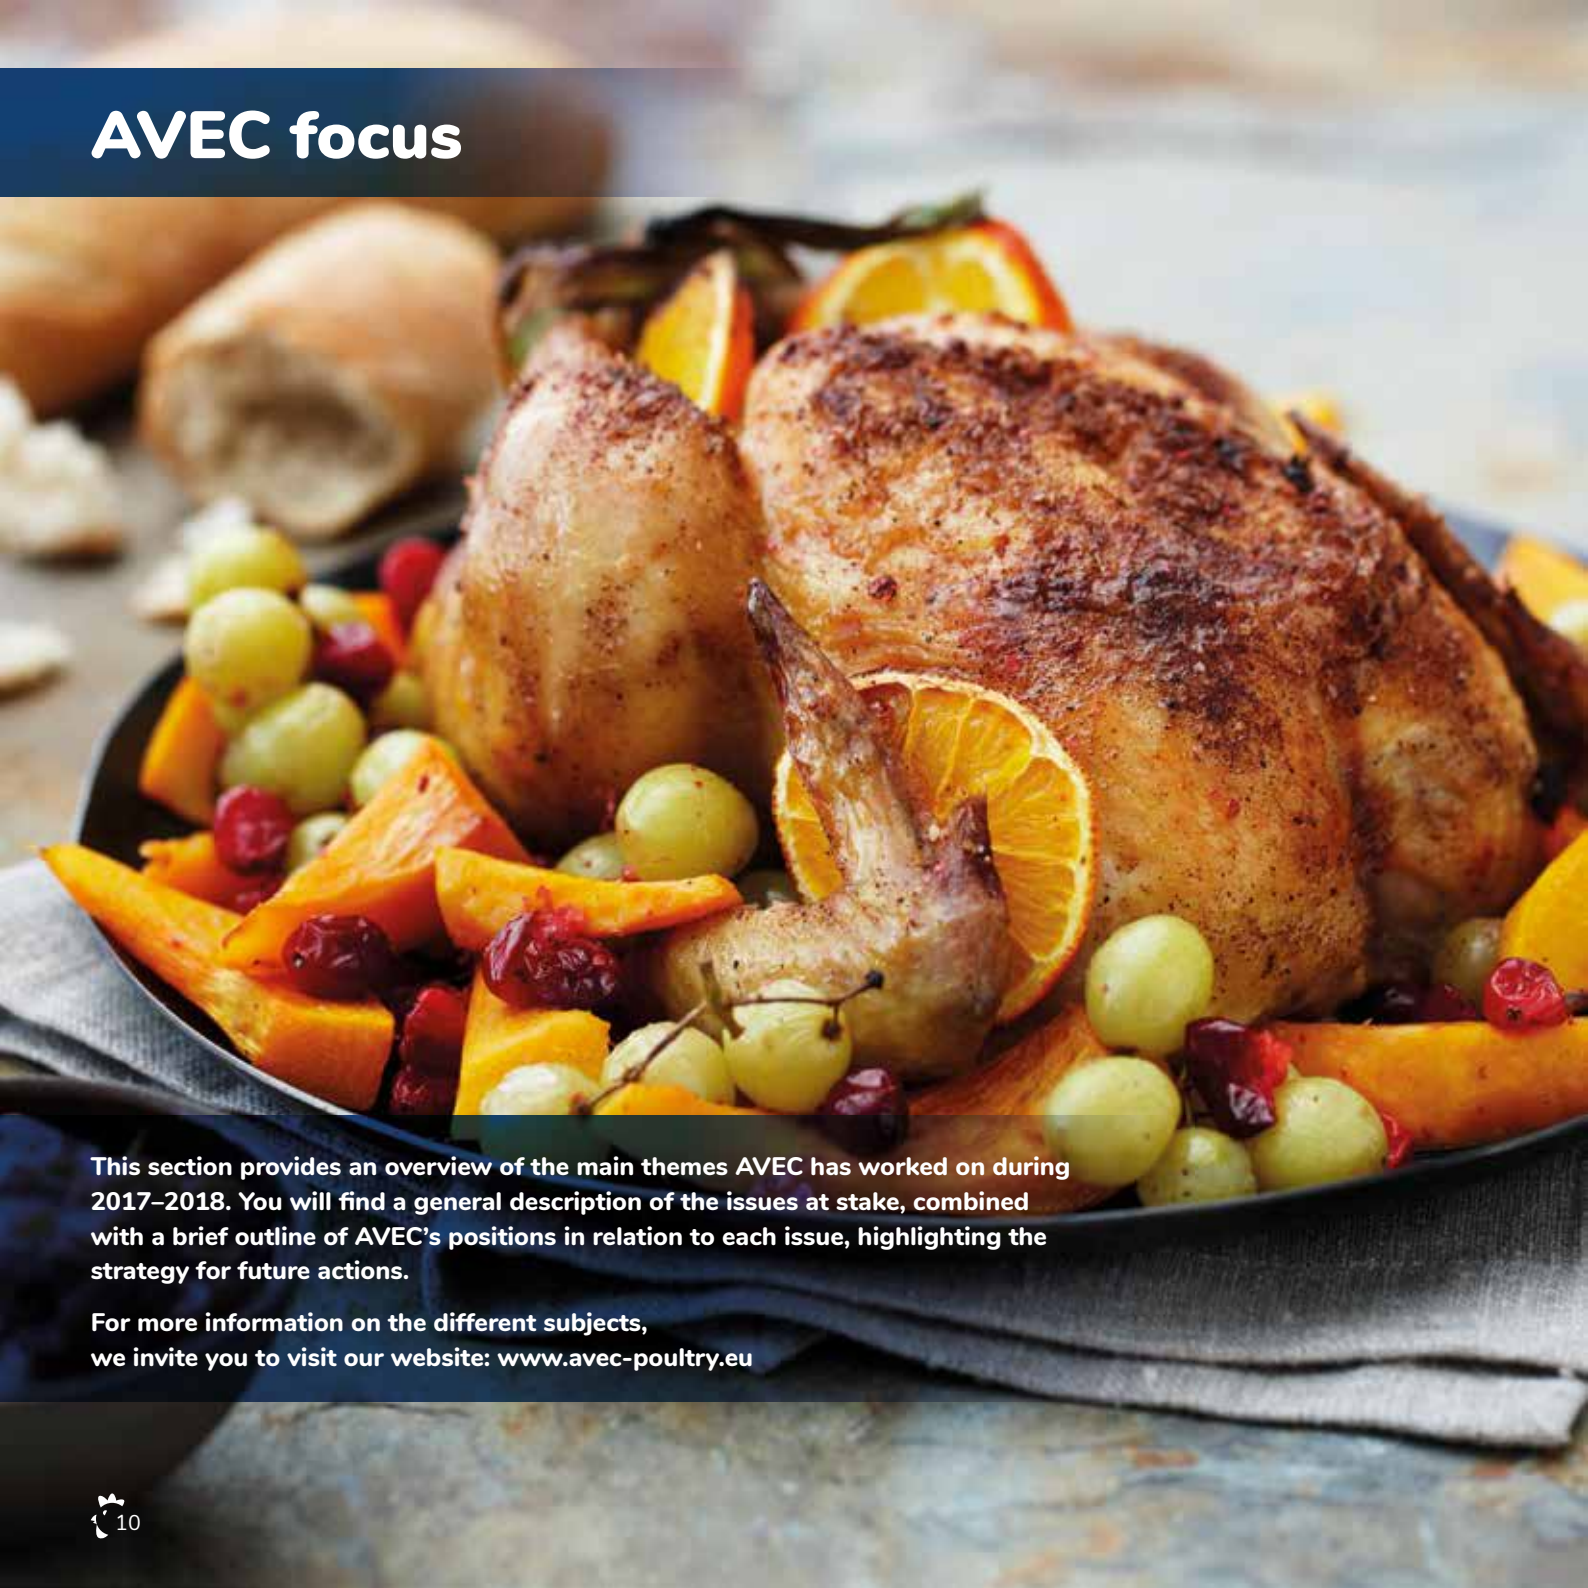

## Executive committee:

- President: Mr James H. Sumner, USAPEEC
- Vice-president: Mr. Ricardo Santin, ABPA, Brazil
- Treasurer: Mr Robin Horel, CPEPC, Canada
- Members: Ms Yu Lu, CCNA, China; Dr. Vivien Kite, ACMF, Australia; Mrs Birthe Steenberg, AVEC, EU
- Associate members: Laura Villareal, Merck Animal Health (Suppliers group); Inma De La Vega, McDonald's Corporation (End users/consumers group); Stig Munck Larsen, Danish Agriculture & Food Council (Producers/processors group)
- Secretary general: Marilia Rangel

## Recent IPC conferences:

# AVEC focus

A close-up photograph of a roasted chicken, likely a turkey or large chicken, served on a dark platter. The chicken is golden-brown and garnished with fresh orange slices, green grapes, and red cranberries. The platter is set on a light-colored, textured surface, possibly a tablecloth or napkin.

This section provides an overview of the main themes AVEC has worked on during 2017–2018. You will find a general description of the issues at stake, combined with a brief outline of AVEC's positions in relation to each issue, highlighting the strategy for future actions.

For more information on the different subjects, we invite you to visit our website: [www.avec-poultry.eu](http://www.avec-poultry.eu)

# AVEC Working Group on Animal Health and Animal Welfare

Chair, Harald Schliessnig

This working group focuses on best practices regarding the health and welfare of animals. Animals are at the heart of our daily work and we are responsible for ensuring their well-being; our ultimate goal is disease prevention. The working group has held three meetings so far in 2018 and experts from the European Commission were invited to attend.

## Avian influenza, 2017–2018

AVEC and the European poultry sector are committed to upholding the recognised biosecurity measures required to prevent avian influenza (AI) viruses from infecting our livestock.

Despite the decrease in cases, AI poses a serious threat to the poultry sector and still has the potential to heavily impact both animal health status and production in Europe. Outside the EU there have been cases of AI in Afghanistan, Iran, West Africa, Hong Kong, Taiwan and China. The latter, which has a huge problem, started a vaccination program against H7N9, because this strain is zoonotic. All these cases still have an impact on the export of poultry meat from these countries to third countries.

The Commission updated the control measures in the four EU countries affected this year. The designation of a new EU reference laboratory for AI and Newcastle disease will be necessary because of Brexit, and continued discussion on the definition of captive birds/backyard flock by the World Organisation for Animal Health (OIE) is ongoing. To this end, AVEC is continuing to ensure effective and proactive cooperation and liaison with the European institutions and national stakeholders.

## OIE on avian influenza

AVEC welcomes the OIE general revision of the glossary definitions in the terrestrial code. From a European point of view, we suggest having a high level of consistency and consensus between the OIE definitions and those of Regulation (EU) 2016/429 of the European Parliament and of the Council of 9 March 2016 on transmissible animal diseases and amending and repealing certain acts in the area of animal health ('animal health law').

In particular regarding the definition of backyard flock, **AVEC welcomes the member countries' requests to clarify the use of the term 'backyard poultry' and encourages OIE to agree a definition that could be uniformly applied in all situations.**

## Animal health law

The Commission is working on the conditions of the implementing and delegated acts of a new animal health law. AVEC welcomes the opportunity to actively participate in discussions with the European Commission and the member states to ensure a level playing field in Europe.

## Use of antimicrobials

We are committed to reducing the risk of antimicrobial resistance (AMR) by minimising the use of antibiotics in poultry production. In recent years, antibiotic use in poultry meat

production has been significantly reduced across the EU. AVEC and the EU poultry meat sector are committed to promoting the responsible use of antibiotics. Zero use is neither ethical nor sustainable and poultry farmers and veterinarians need to have antibiotics to maintain the health and welfare of birds. However, there is still work to be done to ensure that the critically important antimicrobials for human medicine are only used as a last resort. Discussion and action is needed from politicians and the general public to deal with the threat of AMR. AVEC believes in the 'One Health' approach: to improve health and welfare through collaboration and communication between human and veterinary medicine.

### **European animal welfare platform launched by the European Commission**

The European animal welfare platform and the transport sub-groups aim to provide information, recommendations and proposals for practices which help deliver better animal welfare during animal transport and slaughtering. The role of the platform is to assist the Commission with the development and exchange of coordinated actions on animal welfare. One of the topics discussed was the transport of animals during extreme weather conditions.

AVEC will attend future meetings and support this platform with its expertise, and will also contribute to the development of consistent factsheets extracted from the EC animal transport guides.

### **Broiler welfare report**

In April 2018, the European Commission published its report on the application of Directive 2007/43EC and its influence on the welfare of chickens kept for meat production, as well as the development of welfare indicators.

The report points out that controls based on monitoring footpad dermatitis are best for demonstrating an improvement in animal welfare. Such controls are the most efficient and effective way of prioritising farm investigations. The

European Food Safety Authority (EFSA) noted that member states are aware of the steps needed to implement monitoring systems for footpad dermatitis and that two thirds had already established such systems.

AVEC will cooperate with the Commission and member states to disseminate examples of good practice and guidance on farm management.

### **Veterinary medicinal products and medicated feed**

New European regulations will soon be published, the main aim of which is to limit the use of antibiotics for animals that are not yet sick, but may run the risk of falling ill. These will define the role of both prophylaxis and metaphylaxis.

Certain critical antimicrobials will be set aside for the treatment of certain infections in humans in order to preserve their effectiveness.

AVEC welcomes this new legislation which will clearly set out EU standards which may benefit fairer international trade negotiations.

## AVEC Working Group on Food Safety and Food Quality

Chair, Richard Griffiths

Consistent delivery of safe, wholesome, and nutritious poultry meat and poultry meat products is a massive undertaking that AVEC members do very well. Behind the meat on our supermarket shelves there is a raft of regulatory and technical excellence that helps produce the high quality and trusted food that European consumers expect. The AVEC Working group on food safety and food quality is the driving force and authoritative voice on processing issues for the sector.

Bringing together experts from across Europe, the working group engages with officials from the European Commission to help shape regulation, give consumers confidence in our standards, and ensure that our farm-to-fork methodology continues to be world-leading.

### Official controls

The way in which official controls (the framework for producing and inspecting hygienic food production) are delivered is under review by the Commission. While people, in the form of inspectors and veterinarians, are part of everyday life in slaughterhouses and processing plants, the technology around them is improving rapidly. Production line speeds of over ten thousand birds per hour are now commonplace, so AVEC is advocating that inspection tasks must adapt accordingly.

### Microbiological management

We know more now than ever before about the microbiological safety of meat, and techniques are being developed that minimise any risk. Old-style visual inspection, while useful for spotting animal health problems, cannot compete with microbiological inspection in managing this challenge.

A new control measure for campylobacter (a food-borne bacteria) was introduced this year, with an initial target of 40% of samples being allowed to register over 1,000 cfu/g. AVEC members have taken up the challenge and are working hard to understand how the reduction of this complex bug can be achieved. We expect results from the initial sampling data later in 2018.

### Stunning methods

With animal welfare at the point of slaughter a key area of focus, it is interesting to see that a new stunning method has been approved by EFSA. Low atmospheric pressure stunning (LAPS) is now available for use, following trials in the USA, and AVEC members are currently assessing this new technology.

### Mechanical deboning and fragmenting

AVEC is continuing to push the Commission to review its definition of mechanically separated meat. Legislation has not maintained pace with the developments in machinery technology, in that meat can now be recovered by mechanical techniques without adversely affecting its structure and

quality. This has the potential to deliver more meat of higher quality, and also to improve sustainability of production.

### Reducing waste

Usually described as 'fifth quarter', certain parts of a bird are not popular with European consumers, such as feet, heads, and offal. While still fit for human consumption, they fit into a category that allows them to be either exported or used in pet food. AVEC is working hard with the Commission to ensure that as much good quality 'fifth quarter' product remains economically viable, as any downgrading means it has to be disposed of.

### Meat denomination

AVEC is participating in a discussion looking at names or terminology that are traditionally associated with meat. With a growth in vegetarian and vegan products and lifestyles, it is very important that consumers, whether meat-eaters or not, aren't misled by the description or labelling of the products they buy. AVEC fully supports clear and unambiguous information for consumers.

### Origin labelling

Today, 25% of the breast meat consumed in the EU is imported from third countries (mainly Brazil, Thailand and Ukraine). This meat is mainly consumed in mass catering, food service or as meat preparations, and therefore the information about the origin of the meat is not accessible to consumers.

EU poultry meat producers believe that consumers should have better access to information about the origin of meat, as well as the products offered by these channels, especially when meat is imported from third countries. EU producers have to comply with very stringent EU rules, whereas imports from third countries may not be fully compliant with these same standards all along the food chain.

Therefore, although EU producers recognise the complexity of such labelling, AVEC is advocating the mandatory labelling of all products containing more than 25% of poultry meat with the mention "EU" or "non EU", along with the name of the country where the meat comes from outside the EU.

## Turkey sector

Yann Brice, Chair,  
Turkey Working  
Group

### State of the turkey market

As expected, following the new avian influenza crisis in 2017, turkey production decreased, but slightly less than envisaged (-0.5%). This decline in production was more pronounced in Germany (-7.3%), France (-1.1%) and Italy (-1.8%). In contrast, Poland (+2.88%) and Spain (+7.4%) maintained significant growth in production. The United Kingdom has remained stable.

With an average consumption of 4kg per capita over the last two years in Europe, the consumption of turkey meat remains stable, but still struggles against a growing consumption of chicken meat. Restoring the image of turkey meat is essential if we want to keep it on our plates. Some member states have done this successfully. Our eyes must also turn a little further east, to Russia, where demand for turkey has been increasing over the last two years, especially in the big cities. We observe there the development of range of processed and cooked products, adapted to the country's consumption trends. Considering the will of the Russian government to develop meat production with long-term project planning and funding available to achieve it, we must remain vigilant.

### Histomonosis – the fight is ongoing!

Despite our efforts, we are still not fighting effectively against histomonosis, which is a scourge for turkey producers.

This disease is a serious and permanent threat to the health and welfare of animals worldwide, particularly in the EU. An EFSA technical meeting on histomonosis in 2013 concluded that coordinated assistance from all stakeholders was needed to help alleviate the suffering of animals and to seek appropriate control measures.

For many years, histomonosis has been controlled by effective drugs, but in recent years, these have been banned or withdrawn from the market, resulting in an increase in the number of incurable epidemics, a deterioration of birds' welfare and considerable economic losses for farmers and businesses. In some cases, the social impact for the farmer is significant. Many of them, after having been hit by histomonosis, reconsider their desire to rear turkey, not for economic reasons, but because of their inability to prevent their animals from suffering.

The University of Vienna, in partnership with AVEC, took the initiative to create an online (European) histomonosis case-finding form ([blackheaddisease.info](http://blackheaddisease.info)) to consolidate a globalised database of all histomonosis cases identified. This database is providing real added value in the knowledge and monitoring of this disease, but it cannot be effective without the active participation of the stakeholders. If everyone (veterinarians, poultry farmers, companies, etc.) is involved and agrees to contribute, its value will only be multiplied. Let's be collective.

### Societal expectations are not just a trend

Societal expectations are an increasingly important factor in livestock farming. We are now going beyond the simple fashion effect of a diet. Farmers are regularly targeted by animal welfare organisations, which use diverse strategies to create difficulties for them, including illegal ones, such as breaking into poultry houses.

Some of these organisations have an aura of respectability, and environmentalists, media and politics are relaying these issues and deviations from a standard they have set themselves. Rare are the European countries today which do not have to deal with the issues around beak trimming, mass production, stocking density, antimicrobial resistance,

animal suffering, pododermatitis, mortality or welfare during slaughter. To avoid stigmatising production and farming methods, and to put a stop to overstatements, it is important to consider these changes in practices rationally. The revision of the European turkey guide is certainly a good one.

## AVEC Working Group on Sustainable Production

The issue of sustainability is a topic of great interest for poultry meat producers in a sector that is fully committed to addressing the challenges posed by climate change. They consistently invest to adapt their production systems in order to improve overall environmental efficiency along the supply chain.

Through different initiatives and projects at EU and international level, AVEC has participated in the efforts made by the poultry meat sector to improve its environmental performance. However, it is essential that any sustainability policy is viable and therefore the economic, social and environmental components need to be well balanced.

Poultry meat has the best feed conversion ratio of the different meat species and therefore produces lower emissions than other meat sectors. Despite these advantages, the poultry sector is continuously working to increase its efficiency to address the challenge of climate change.

The production of food – and meat in particular – is often blamed for wasting natural resources and for its negative impact on the environment.

It has been suggested that conventionally indoor-reared poultry may be less sustainable than more extensive production systems such as free-range and organic poultry.

In fact, due to better conversion of the feed intake into protein, the meat from conventionally indoor-reared poultry has lower emission levels and can be offered at a price that is affordable for more consumers.

This should be highlighted in the promotion of sustainable meat production since the theme of sustainability is not only linked to environmental issues – but also to secure access to food (food security) and to the economy of the sector.

In the context of the growing demand for food, the focus should be on both satisfying societal demands and guaranteeing access to high-quality and affordable food for all consumers.

## AVEC Working Group on Trade

**The Working Group on Trade advocates for a level playing field with all trading partners**

The overall aim of the working group on trade is:

- to support and update the board on trade issues
- to take positions and policy directions to defend the interests of the EU poultry sector
- to ensure that EU poultry producers can operate in a competitive environment vis-a-vis third countries, based on a level playing field approach

Global free trade in general appears to be in a difficult situation and under pressure from the latest trade restrictions on a wide range of products, initiated by the USA against its major trading partners. The risk of a chain reaction of retaliatory measures can severely impact sectors and create an unhealthy trade diversion characterised by excess global supply, increasing the local competition and leading to negative price pressure.

Poultry meat, being the most traded meat, could be significantly exposed to trade diversion if a global trade war escalates into increased levels of protectionism. What has taken decades to build up in terms of a rules-based multilateral trade system under the WTO, unfortunately may only take a short time to break down if agreements are not respected, and countries take unjustified trade measures that are not WTO compliant.

Regarding poultry meat, we have already seen numerous trade measures being imposed globally, both in the form of direct increases of import duty and as non-tariff barriers

Chair, Stig  
Munck Larsen

related to sanitary and phytosanitary (SPS) issues. In addition, the rules on halal have become increasingly important in Muslim communities, with new sets of regulations on food safety in regions like the Gulf States. The challenge for EU poultry products for these destinations is not in complying with the food safety requirements, but the need to operate in an informed and transparent way without being faced with obstacles to trade.

### **Main trade issues in 2017–18**

In the last year the Working group on trade has been extraordinarily busy with five major topics:

**1. Trade restrictions from South Africa.** The South African safeguard investigation against imports from the EU led to a provisional duty of 13.9% in December 2016, on top of the existing anti-dumping duty imposed on imports from the UK, Germany and the Netherlands.

The provisional safeguard duty has been terminated and no definitive safeguard measures have yet been imposed. Instead, SPS measures have been initiated against several EU exporting countries due to outbreaks of avian influenza (AI), without respecting the World Organisation for Animal Health (OIE) principles of regionalisation. The South African authority has informed importers that lifting these SPS measures requires an onsite inspection in the countries concerned – a process which is still ongoing and can be expected to last some time, due to claimed lack of resources in the South African administration.

In August, South Africa lifted the SPS ban on some EU member states, while other members are still waiting for this clearance. At the same time the SACU (South Africa Custom Union) Council of Ministers has decided on a draft proposal to

impose a safeguard duty of 35.3% which will depreciate over four years before the measure lapses, unless it is decided to renew it.

AVEC finds it unacceptable to further delay the opening of the South African market to EU exports in line with the spirit of the EU-South African (SACU) Economic Partnership Agreement (EPA), that provides for free market access for poultry meat. AVEC is working closely with the EU Commission to find a viable solution that opens the market in respect of the EPA and the recovery of the South African poultry sector. An agreement can only be reached provided that South Africa removes applied import measures and respects the OIE recommendation on regionalisation.

**2. Exploitation of loophole in Ukrainian agreement in DCFTA.** AVEC is seriously concerned about the unintended loophole Ukrainian exporters have utilised in the Deep and Comprehensive Free Trade Areas (DCFTA) agreement. The EU poultry sector was treated as a sensitive sector in the free trade negotiation and for that reason tariff-rate quotas (TRQs) were granted to Ukraine. The use of a very particular cut which has never been traded or demanded in significant commercial trade clearly indicates that exporters have speculated on such a tariff-circumvention against the political spirit of the trade agreement. An export under this tariff line with zero duty increased from zero to 27.000 tonnes in 2017 alone, and without any upper limits. This is extremely harmful for the EU poultry meat sector, especially in the context of non-respect of the commitment made by the Ukrainian authorities on the approximation of their regulations (particularly on animal welfare) with EU regulations.

AVEC is confident that the EU Commission will ensure ordinary trade will take place, respecting the spirit of the agreement, while imports will fully comply with the same strong EU requirements that EU producers must comply with.

**3. Imports from Brazil and Mercosur negotiations.** AVEC is satisfied with the measures taken against Brazil due to the meat scandal and encourages the Commission to continue a strict test and control programme on imports of poultry meat which preferably should cover all imports from Brazil – and other countries.

AVEC is deeply concerned about the possible outcome of the Mercosur free trade negotiations, where almost 90.000 additional tonnes have been offered, even though poultry is being treated a sensitive sector. A further concern is that any new concession will not be part of the TRQ split following Brexit. In other words, additional TRQs in Mercosur will be solely allocated to the EU27. AVEC believes that ‘enough is enough’ and a further concentration of TRQs will be detrimental to the interests of the EU poultry sector.

**4. Consequences of Brexit.** As for the EU internal market, the UK withdrawal from the EU as of 31 March 2019 is a factor that could have a significant impact on the EU poultry sector for both parties. At this point in time it’s still unclear if the withdrawal will come out as a hard or soft Brexit, which will be decisive for the future trade cooperation in terms of tariff rates and equivalence rules on food safety and animal welfare etc. The EU poultry sector is advocating strongly for a status quo in a future free trade agreement which provides for an unchanged functioning of the internal market with application of EU regulations and no border control or customs clearance.

**5. Halal requirements.** AVEC has been involved in the new halal requirements in the Gulf Cooperation Council (GCC) area lead by UAE. The main challenge not only for EU exports but all global imports into mainly UAE and Saudi Arabia is the requirement not to use any kind of stunning methods before

the slaughtering of birds. AVEC is working closely with the International Poultry Council (IPC), on changing the ban on stunning allowing for the use of reversible stunning.

### **Bilateral free trade agreements with caution**

On a positive note, AVEC is strongly in support of the free trade agreements the EU has recently negotiated with trading partners like Japan, Vietnam and Mexico. In particular, the trade deal with Mexico could potentially open a completely new market for leg quarters and mechanically separated meat (MSM) which has become more important, considering the possible trade war with USA in the NAFTA free trade agreement.

AVEC is concerned when bilateral free trade agreements are negotiated against the interests of the EU poultry sector, allowing for more imports to the detriment of the creation of growth and jobs in the EU. The EU poultry sector being traded off against other sectors as a precondition for finalising trade deals is not acceptable. Poultry meat should always be treated as a sensitive product in trade negotiations when partners prefer exports of poultry meat and, in any case, it should be clearly stated that compliance with EU legislation on food safety, animal health, environment, and animal welfare is an absolute requirement.

AVEC is also concerned when trading partners act against the spirit of ratified free trade agreements. Lessons learned from the implementation of free trade agreements clearly suggest that EU stakeholders need to be in very close dialogue with the Commission, when technicalities are being concluded with partners, to limit the risk of trade being done against the spirit of the agreements.

### **The outlook for trade in poultry**

The outlook for international trade in poultry meat is still good due to a stable increase in global consumption and demand. The stability in trade flows is more uncertain and a level of volatility and trade diversion might be expected in the coming years. This may come from trade restrictions and an

increasing demand for higher levels of self-sufficiency, especially among countries with a rising middle-class that has an increasing appetite for poultry meat.

Several key emerging poultry meat consuming countries have suggested that an import imbalance is present in the sense that the import share of poultry meat consumption is too high. A strategic policy in countries like South Africa, Saudi Arabia, Algeria, Egypt, Russia and China to limit the import of poultry meat could have a significant impact on the global trade in poultry meat and create trade diversion and market instability if several thousand tonnes of poultry meat has to find other destinations, putting those markets under pressure. This could be the time to create a new chain reaction, forcing those importing countries to initiate trade measures on imports to defend and preserve our own poultry production.

Only the future will tell if an overcapacity in global exports has been built up, not corresponding to the global increase in poultry consumption and the demand for imports. An overcapacity in exports is by nature a threat to the global poultry trade and risks undermining market stability to the detriment of the importing and exporting countries. The global poultry sector is only viable if equilibrium is established between global demand and supply.

The Working group on trade has a great interest in engaging all AVEC members to contribute actively in effectively facilitating the best factual grounds for decisions taken by the AVEC board.

“

**Jobs in thriving rural areas:**

The European poultry meat sector promotes economic growth and strengthens local communities by creating jobs in rural and semi-rural areas across Europe.

”
